# Environmental Product Declaration

In accordance with ISO 14025:2006 and EN 15804:2012+A2:2019/AC:2021 for:

# Mora MMIX II, Basin mixers

from O(C)

This EPD covers multiple products, based on representative product 333001 The list of included products is presented on page 14 of this EPD document

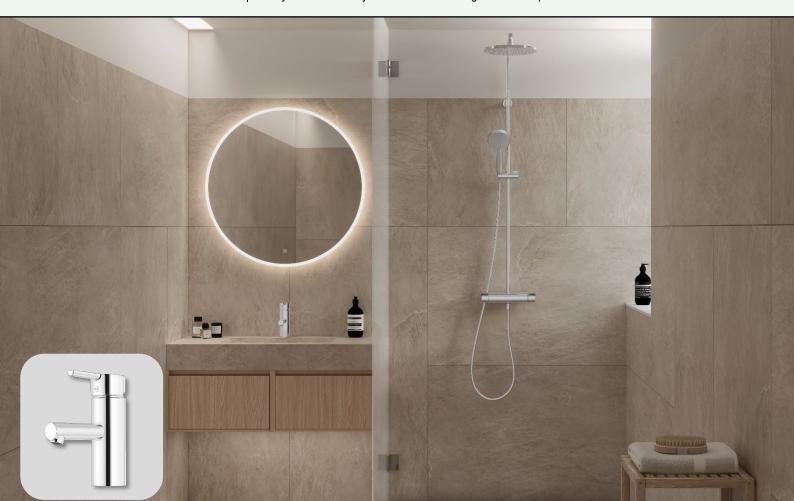

Programme: The International EPD® System, <u>www.environdec.com</u>

Programme operator: EPD International AB EPD registration number: EPD-IES-0014425

 Publication date:
 2024-09-20

 Valid until:
 2024-09-20

An EPD should provide current information and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at www.environdec.com

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but registered in different EPD programmes, or not compliant with EN 15804, may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterisation factors); have equivalent content declarations; and be valid at the time of comparison. For further information about comparability, see EN 15804 and ISO 14025.

## **Company information**

Owner of the EPD: FM Mattsson Group

Contact:

Phone: +46 250 59 60 00

Email: <a href="mailto:info@fmmattssongroup.com">info@fmmattssongroup.com</a> Web: <a href="mailto:www.moraarmatur.com">www.moraarmatur.com</a>

#### Description of the organisation:

FM Mattsson Group conducts the sale, manufacturing and product development of water mixers and related products under the established brands of FM Mattsson, Mora, Damixa, Hotbath, Aqualla and Adamsez.

The group's vision is to be the customer's first choice in the bathroom, kitchen and beyond. In 2023 the business generated sales of more than 1.9 billion SEK from its companies in Sweden, Norway, Denmark, Finland, Benelux, UK, Germany and Italy and had 568 employees. FM Mattsson Group is listed on Nasdaq Stockholm.

Product-related or management system-related certifications:

ISO 9001:2015 ISO 14001:2015

Name and location of production site(s):

FM Mattsson Group Östnorsvägen 95 792 95 Mora, Sweden

#### **Product information**

Product group name: Mora MMIX II, Basin mixers

This EPD covers the product group – Mora MMIX II, Basin mixers. The EPD is based on declared results per kg product for a representative product within the product group. The criterion for defining the representative product is mainly based on the sales volume of products in the group.

<u>Reference Product:</u> The reference product basin mixer 333001 was chosen as the representative product based on high sales volume.

<u>Product group identification:</u> Mechanical mixing valve for washbasin, horizontal mounted, single hole, according to EN 817

<u>Product group description:</u> Mora basin mixers are one-hand single lever mixers for installation in washrooms and bathrooms. The mixers are mechanically operated to mix hot and cold water as well as regulate the water flow. Mora basin mixers include built-in features for limitation of water flow, temperature limitation and cold-start functions to ensure a sustainable product life cycle with efficient use of water and energy during the usage phase and fulfils e.g. the flow rate requirements of the EU Taxonomy.

<u>UN CPC code:</u> 42911 – Sinks, washbasins, baths and other sanitary ware and parts thereof, of iron, steel, copper, and aluminium.

Geographical scope: Europe

### **LCA** information

Functional unit / declared unit: 1 kg of basin mixer.

Reference service life 1: 16 years.

<u>Time representativeness:</u> The data used for the LCA calculation covers bill-of-materials as well as operations at FM Mattsson Group, Mora for the year 2023.

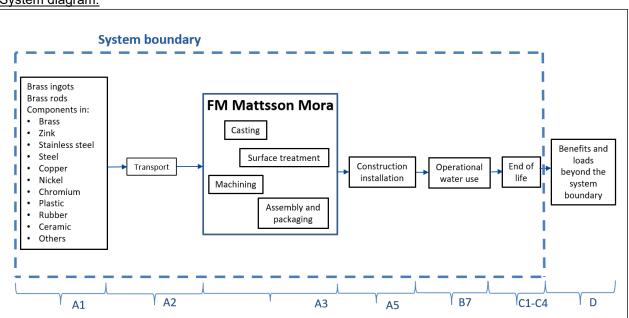

<u>Allocation:</u> Energy and materials input flows for manufacturing activities at FM Mattsson Group factory in Mora are allocated between the studied products by mass. Allocation between the studied products is based on manufacturing data from FM Mattsson Group factory in Mora for the year 2023.

<u>Cut-off criteria:</u> All materials and energy used to manufacture the basin mixers are included. Impacts from infrastructure and/or capital goods are excluded as they are assumed to be negligible.

<u>Database(s)</u> and <u>LCA</u> software used: Ecoinvent 3.9.1 with the system model for "allocation, cut-off by classification" and SimaPro 9.5.0.0. The LCIA is based on the EN 15804 reference package EF 3.1.

<u>Description of system boundaries:</u> Cradle to gate (A1-A3) with options, i.e., also operational water use module B7, waste management modules C1–C4 and beyond end-of-life module D.

#### System diagram:

\_

<sup>&</sup>lt;sup>1</sup> The reference service life is valid under domestic and indoor use conditions and defined based on Cordella M. et al. (2014).

### More information

Supplier specific electricity mixes and corresponding GWP impact: Sweden: 37.1 g CO<sub>2</sub>/kWh; Denmark: 224 g CO<sub>2</sub>/kWh; Hungary: 406 g CO<sub>2</sub>/kWh; Lithuania: 459 g CO<sub>2</sub>/kWh; Portugal: 335 g CO<sub>2</sub>/kWh; Taiwan: 766 g CO<sub>2</sub>/kWh; China, southwest region: 314 g CO<sub>2</sub>/kWh; China – unknown location: 948 g CO<sub>2</sub>/kWh.

<u>Electricity used in module A3:</u> Purchased electricity for operations at FM Mattsson Group, Mora is 100% renewable based, from wind, hydro and solar with a GWP impact of 13.4 g CO<sub>2</sub>-eq/kWh.

<u>Information about scenarios and additional technical information:</u> Information about the scenario for operational water use for this product is provided under "Additional Information" below.

<u>Variations in environmental impact results aggregated over modules A-C:</u> For the list of included products in this EPD, the largest variations in aggregated results over modules A-C, relative to the representative product are less than 10% for all the mandatory environmental impact indicators, except for ODP (13%) and ADP-minerals & metals (58%).

Modules declared, geographical scope, share of specific data (in GWP-GHG results) and data variation (in GWP-GHG results):

### LCA modules

**A1 Raw material supply:** This module relates to raw material extraction and processing, processing of secondary material input (e.g. recycling processes), transport to component manufacturing and component manufacturing.

**A2 Transportation:** This module relates to transport from raw material extraction and processing, and component manufacturing to FM Mattsson Group, Mora.

**A3 manufacturing:** This module covers the relevant production processes at FM Mattsson Group, Mora. The processes cover casting, machining, surface treatment and assembling of components. Treatment of waste and wastewater are also included.

**A5 Construction installation:** This module covers transport of cardboard and paper packaging wastes to waste management and their incineration. It is assumed that 26% of the packaging waste is incinerated.

**B7 Operational:** This module covers the production, heating and wastewater treatment of tap water use over the reference service life of the product. Further details on the scenario for operational water use are given in "Additional Information" below.

**C1 De-construction:** This module relates to the dismantling of the product at the end-of-life. It is assumed that the dismantling is done manually and the related impacts are assumed to be negligible.

**C2 Waste Transport:** This module relates to the transport of the dismantled product at end-of-life to a waste processing site. An average distance of 100 km is assumed.

C3 Waste processing: This module covers impacts related to sorting and recycling processes for the relevant material components. It is assumed that 90% of the brass and non-brass metals as well as 74% of the packaging wastes are recovered for recycling. The remaining portions of the brass, non-brass metals as well as all the plastics and rubber components are assumed to be incinerated with energy recovery.

**C4 Waste disposal:** This module relates to waste disposal processes such as landfilling. It is assumed that the ceramic components in the studied products are landfilled.

## D Benefits and loads beyond system

**boundary:** This module covers benefits and loads associated with recovery/recycling beyond the defined system boundary. For this product, this covers benefits from recycling and waste incineration.

<sup>\*</sup> Disclaimer: The results of this environmental impact indicator shall be used with care as the uncertainties of these results are high or as there is limited experience with the indicator.

The estimated impact results are only relative statements, which do not indicate the endpoints of the impact categories, exceeding threshold values, safety margins and/or risks.

As this EPD includes module C, the use of the results of modules A1-A3 without considering the results of module C is discouraged.

Note that the results are per declared unit of 1 kg of the product and in order to estimate results per 1 unit of a product, the results declared here per 1 kg of the product should be multiplied by its gross weight, including packaging. Also the results for module B7 are per a flow rate of 1 liter per minute and in order to estimate results for a specific flow rate for a product, the results declared here for 1 liter per minute should be multiplied by the actual flow rate of the product, Further information about the weights and flow rates of the listed products in this EPD on page 14 of this document or at <a href="https://www.moraarmatur.com">www.moraarmatur.com</a>.

## Additional environmental information

Overall, the results for the potential environmental impacts over the entire life cycle of the basin mixers show that the use phase (B7) related to operational water use is by far the most significant contributor. It illustrates the importance of the use phase in reducing environmental impacts associated with sanitary fitting products. Design of energy-efficient products, choice of renewable energy sources during the use phase as well as appropriate user behaviour can play a significant role in lowering the use phase impacts. Studies have shown that up to 40% energy savings can be realized through energy-efficient taps and showers (Dodoo et al. 2017; Folkeson et al., 2017).

## Operational water use scenario

For this product, the scenario for operational water use has been modelled based on average performance parameters for sanitary fitting products derived from a study by Cordella M. et al. (2014) on different sanitary products within the EU and information from the European Water Label (EWL, 2022). The parameters used to estimate the water use for the basin mixers as well as the energy mix for water heating are given in the tables below. Based on the given parameters and assumptions, the annual average water consumption for this product is 2 555 liters per person. About 40% of this is assumed to be hot water use and the corresponding annual energy use to heat the water is about 29 kWh. Note that the corresponding climate impact for module B7, 194 kg CO2-eq is based on an assumed flow rate of 1 liter/minute for 16 years of use by one person and also includes water production and distribution, as well as waste water treatment. In order to estimate the climate impact for B7 for a specific basin mixer, the climate impact result of 194 kg CO2-eq should be multiplied by its actual nominal flow rate and further information about the nominal flow rates of the listed basin mixers are given on page 14 and also available at <a href="https://www.moraarmatur.com">www.moraarmatur.com</a>.

| Parameters used to model the operational water use for the basin mixers |       |                |  |  |  |  |  |
|---|-------|----------------|--|--|--|--|--|
| Parameter   | Value | Unit           |  |  |  |  |  |
| Reference flow  | 1     | l/minute       |  |  |  |  |  |
| Use cycles  | 7     | Per person/day |  |  |  |  |  |
| Duration of use cycle   | 1     | Minute         |  |  |  |  |  |
| Share of hot water use  | 40    | %              |  |  |  |  |  |
| Cold water inlet temperature  | 15    | °C             |  |  |  |  |  |
| Outlet mixed water temperature  | 40    | °C             |  |  |  |  |  |
| Specific heat capacity of water   | 4.18  | kJ/(kg·K)      |  |  |  |  |  |
| Density of water  | 0.981 | kg/l           |  |  |  |  |  |

The energy mix for the operational water use scenario is modelled based on data for different fuel mixes for water heating in EU households for 2020 (Eurostat, 2022). In 2020, 15% of the total final energy use in the EU was for water heating in the residential sector.

| Energy mix for operational water heating modelling |                  |  |  |  |  |  |
|--|------------------|--|--|--|--|--|
| Energy source                                      | Share, %         |  |  |  |  |  |
| Solid fossil fuels and peat                        | 8.97             |  |  |  |  |  |
| Natural gas  | 22.18            |  |  |  |  |  |
| Oil and petroleum products                         | 16.78            |  |  |  |  |  |
| Renewables and biofuels                            | 11.84            |  |  |  |  |  |
| Electricity  | 13.79            |  |  |  |  |  |
| Heat   | 26.44            |  |  |  |  |  |
| Total  | 100              |  |  |  |  |  |
| Corresponding GWP                                  | 329 g CO2-eq/kWh |  |  |  |  |  |

# Differences versus previous versions

This is the first version of the EPD so there are no differences versus previous versions of the EPD.
